

# CRANSTON, RI

# SOCIOECONOMICS OF SEA LEVEL RISE COASTAL FACTSHEET

## PROJECT OVERVIEW

Rhode Island's municipalities are in the preliminary stages of integrating planning for sea level rise and climate change into their comprehensive planning process. To support these planning efforts of RI cities and towns, RISPP developed the Socioeconomics of Sea Level Rise project. The project aims to assist coastal municipalities in their long-term planning by attempting to identify population characteristics of the people located within sea level rise (SLR) inundation zones 1, 3, 5 and 7 FT. The data presented in this factsheet places a focus on Environmental Justice and Title VI populations.

### METHODOLOGY

The RISPP utilized 2010 Decennial Census data and the latest American Community Survey (ACS) estimates to conduct an extensive data analysis. Staff also utilized CRMC's STORMTOOLS GIS shapefiles to identify the SLR inundation zones. In addition, RI Geographic Information Systems (RIGIS) e-911 data was utilized to identify single family, multi-family and mobile home residential points located within each SLR inundation zone. For more information on the methodology, please reference the full report on our website.

# CRANSTON'S OCCUPIED RESIDENTIAL UNITS & POPULATION **ESTIMATES**

Cranston is one of Rhode Island's 21 coastal communities, located south of Providence, and north of Warwick, Rhode Island.

The City of Cranston has an average household size of 2.49 (2010 Census). The average household size and the percentage of occupied housing units were used to calculate a population estimate. Approximately 83-86% of the residential units located within SLR inundation zones 3, 5 and 7 FT. are occupied units.

SLR Inundation zone	Residential Units	Occupied Unit calculation (Total Units (x) Occ. Housing Unit Rate in SLR zone)	Population calculation (Occupied Units (x) Cranston Avg. HH Size)
1FT.	0	0	0
3FT.	1 SF	<b>1</b> (83% occ. HU)	2
54	8 SF	<b>7</b> (85% occ. HU)	17
7FT.	22 SF	<b>19</b> (86% occ. HU)	47

Residential units were identified in GIS using the e-911 shapefile. All of the residential units located in the SLR inundation zones are single family units. There is a significant change between the estimated population located in the 3 and 5 FT. inundation zone, with an additional 15 people estimated in the 5 FT. zone. The 7 FT. inundation zone has the greatest population and number of residential units, with 47 people estimated within the zone and 19 occupied residential units.

## SLR INUNDATION ZONES

The maps above illustrate each of the SLR inundation zones. Single family units are represented by orange points in the SLR inundation zone maps, while multi-family units are represented by green points.
